SEALED CAVITY PLUG AND RELAY KEY

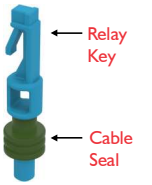

GEP POWER PRODUCTS

NEW

This sealed cavity plug and relay key fits into a range of GEP power distribution modules that are designed for Delphi Metri-Pack 280 Tanged terminals and solves 2 issues.

1. When fitting a Mini or Micro 5 pin relay in the GEP power distribution units, there is always 1 empty cavity that needs to be filled with a cavity plug to ensure the module remains waterproof. This product will seal the cavity.

2. A relay can be plugged into the PDU in 2 different orientations, however only one orientation is correct to ensure the middle terminal is connected to a wire. This product features a protruding relay key to ensure the relay can only be plugged into the PDU in the correct orientation.

SC55-2000A-A001

Part Number	Description
SC55-2000A-A001	Cavity Plug & Relay Key Tanged Blue / Green to suit Delphi Metri-Pack 280 Tanged
